

Wonderware Interface (HMI) Services

Today, many process and packaging systems incorporate HMI (Human Machine Interfaces), providing operators full monitoring and secured control. Together with our comprehensive range of Packaging and Factory Automation solutions, Kraken Automation Inc. (KAI) provides software configuration, commissioning and documentation services for a wide variety of HMI systems.

As a WonderWare Partner System Integrator, our team of engineers and technicians, has developed configurations using WonderWare for HMI applications such as:

- Process and batching operations
- Product routing control on high speed packaging lines
- Monitoring wide area SCADA networks
- Production statistics collection, reporting and trending
- Integration with business level (Enterprise) systems
- Water/wastewater process control systems

With every WonderWare application you are provided with a complete documentation package consisting of the HMI tagname or function block database, screen dumps with full indicator and control descriptions, and a copy of the configuration on electronic media.

Ancillary configurations are offered where the application warrants. These include recipe management, SQL interfaces to plant databases (MS Access, Oracle), historical data extraction to spreadsheets, and statistical process control.

[Contact Kraken Automation Inc. today and find out how we can assist you with your software configuration, commissioning and documentation requirements.](#)
